**Basic Metabolic Profile Collection Container: 1 mL Serum / One SST Remarks: Includes NA, K, CL, CO2, GLUC, BUN, CREA, CA

¹ The Clinical Laboratory Improvement Amendments of 1988 (CLIA) law specifies that laboratory requirements be based on the complexity of the test performed and established provisions for categorizing a test as waived. Tests may be waived from regulatory oversight if they meet certain requirements established by the statute. CLIA waived tests employ methodologies that are so simple and accurate as to render the likelihood of erroneous results negligible; pose no reasonable risk of harm to the patient if the test is performed incorrectly; and/or are cleared by the Food and Drug Administration for home use.
